

ALPHA MANUFACTURING

Reducing Early Turnover through People Analytics

Business Case | Workforce Planning & People Analytics Portfolio

FICTITIOUS DATA CREATED EXCLUSIVELY FOR PORTFOLIO PURPOSES.

Business Overview:

About the company:

- Manufacturing company
- 1.200 planned employees
- Three production shifts
- High operational complexity
- Workforce Planning supported by People Analytics

- HC Plan: **1.200**
- HC Actual: **888**
- Open Positions: **312**
- Occupancy Rate: **74%**

Business Challenge

The Challenge:

Alpha Manufacturing experienced increasing voluntary turnover during the first year of employment, creating hiring pressure, higher recruitment costs, and productivity losses. Leadership requested a data-driven analysis to identify the main drivers and prioritize corrective actions.

Business Questions:

- Where is turnover concentrated?
- Which employee profiles are most affected?
- What factors contribute to early exits?
- Which actions should be prioritized?

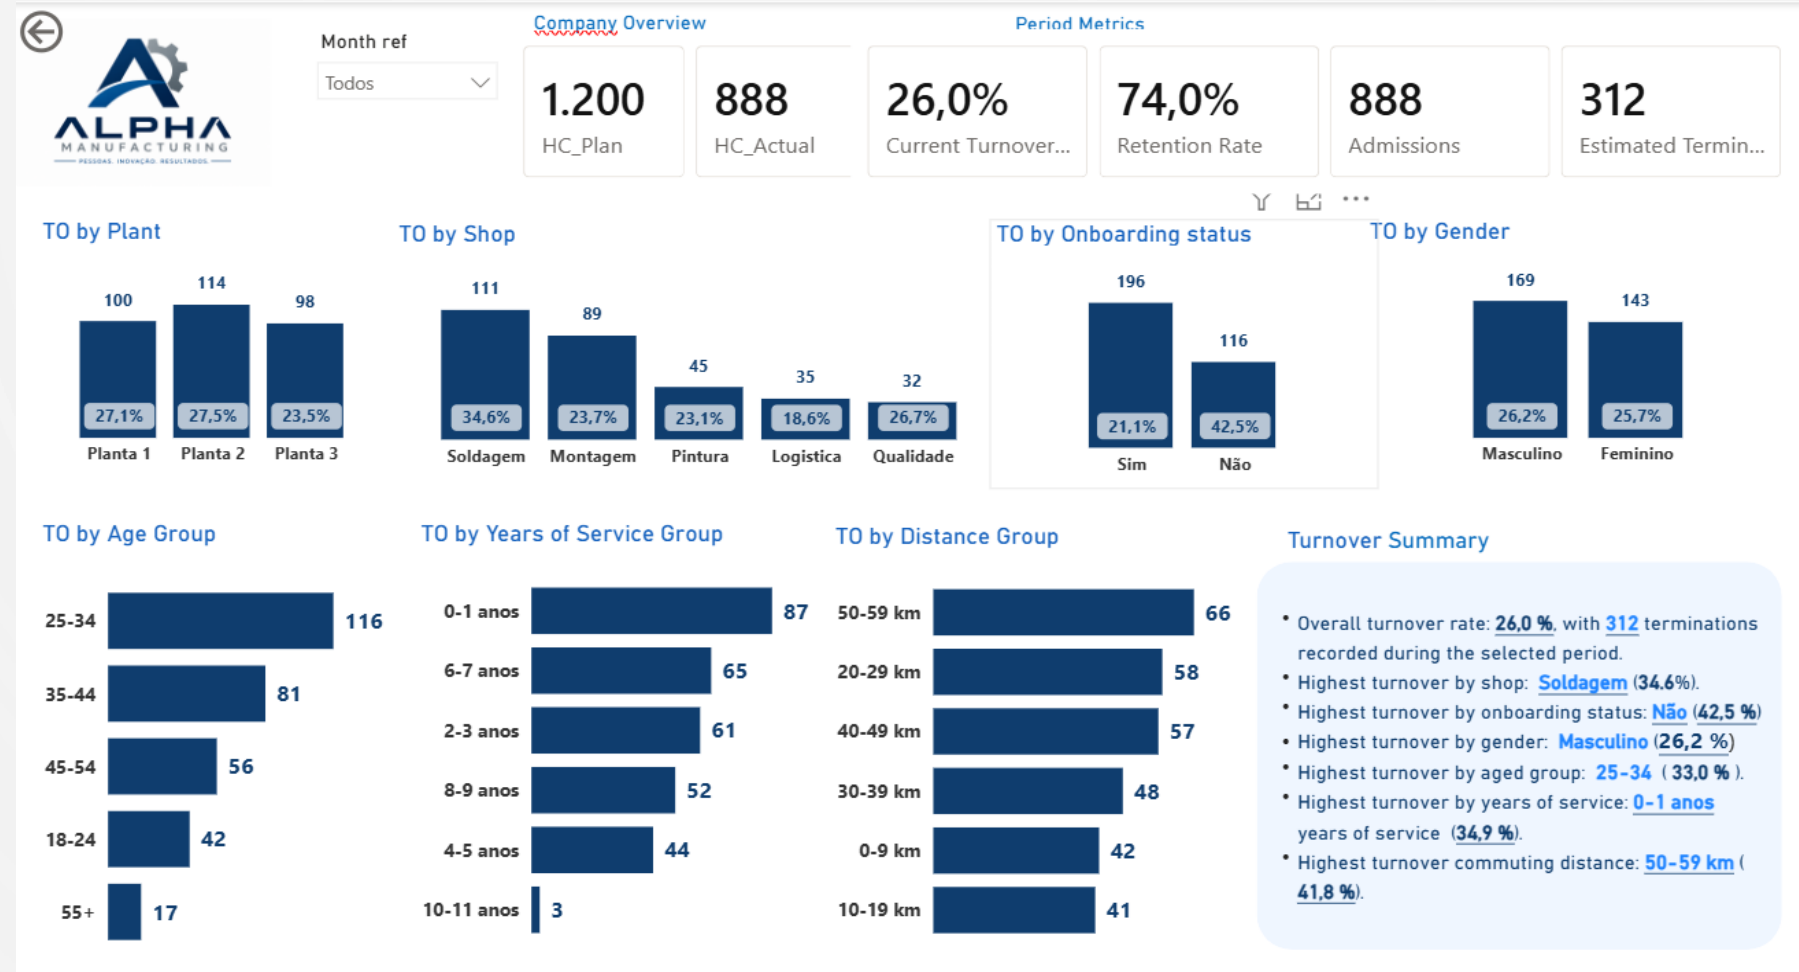

Data & Methodology

KPIs:

- Headcount
- Turnover
- Absenteeism
- Years of Service
- Distance from Home
- Shift
- Department

Dashboard Overview

Executive dashboard used to monitor workforce indicators and identify turnover patterns.

Key Findings

Less than 1 year

Highest turnover among employees with less than one year.

Shift 2

Shift 2 presented the highest turnover rate.

Commute > 40 Km

Employees commuting more than 40 km showed higher attrition.

Welding Department

Welding department concentrated the largest number of early resignations.

Root Cause Analysis

Early Turnover

Onboarding

Inconsistent integration

Leadership

Different management practices

Commute

Long travel distance

Work Environment

Adaptation during first months

Conclusion: Early turnover appears to be driven by a combination of onboarding effectiveness, commuting distance, operational conditions, and leadership practices. Addressing these factors together is expected to improve employee retention.

Recommendations

Initiative	Expected Impact
Standardize onboarding	Faster adaptation
Mentor program	Better retention
Review transportation support	Reduce commuting impact
Monthly turnover monitoring	Early intervention
Leadership coaching	Improve employee experience

Expected Results

Target Turnover:
Estimated Reduce 10%
27% to 17%

Recruitment Cost

Estimated reduced
R\$ 249.600 savings

Productivity

Improved workforce
stability

Employee Retention

Higher first-year
retention

Continuous monitoring through People Analytics
dashboards supports evidence-based decision making.

Key Takeaways:

- Data transformed assumptions into evidence.
- Workforce Planning and People Analytics identified the main turnover drivers.
- Targeted actions improve retention and operational performance.
- Dashboards enable continuous monitoring and strategic decision-making.
